MANAGEMENT PHILOSOPHY

Created on June 30th 2011, Dorval Manageurs Europe is a multi-capitalisation equity fund eligible to PEA investors (French equity savings plan). Stéphane Furet and Louis Bert, select directors of companies likely to offer shareholders capital growth over time. The management team selects companies on the basis of the in-depth knowledge of their directors and management profile, favouring stocks that offer the best growth prospects within a specific risk profile.

The portfolio consists of approximately 40 stocks selected with a view to ensure sectorial diversification but without any correlation to a benchmark. The investment universe is composed of European stocks (minimum 60%) without any market capitalisation limit.

RISK AND REWARD PROFILE

The risk-return scale (profile) is an indicator with a score from 1 to 7. It corresponds to an increasing level of risk and return. It is the result of a regulatory methodology based on annualised volatility, calculated over 5 years. Checked on a periodic basis, the indicator can vary.

PERFORMANCE

	1Mth	3Mths	6Mths	YTD	1Yr	3Yrs	Since 30/06/2011

Performance MSCI PAN EURO	10.2	6.4	19.0	12.7

MONTHLY COMMENTARY

There was a significant rebound in the European market in October (MSCI Pan Euro: +8.4%) : investors were reassured by better economic figures both out of China and the United States, while the eurozone as a whole remains in a phase of slight, gradual recovery in activity. The dollar has appreciated against the euro over the last few weeks due to the prospect of a possible first increase in US short-term interest rates before the end of the year. Furthermore, the first European quarterly results are encouraging, with 50% of published earnings exceeding analysts' expectations. Against this backdrop, Dorval Manageurs Europe posted a return close to its benchmark, with +7.8% in the month (+19.2% YTD) and a YTD outperformance (+9%) that continues to grow. The fund's assets under management have reached €100.8 million.

The month's performance in October was bolstered by purchases in the automotive sector at good prices last month and the good behaviour of mid-caps. UBISOFT was sold after a nice performance, justified by Vivendi's purchase of a stake in the company. Concerning oil stocks which were absent from the portfolio, we added Total, ENI and BP because of the good results for Q315 for the first and now our expectations for the US oil price (WTI), which in our opinion should at least stabilise in the region around \$45.

PERFORMANCE SINCE INCEPTION

PORTFOLIO BREAKDOWN

Past performance is not a reliable indicator of future performance. Performance calculation takes into account net dividend re-invested for the fund and net dividend non re-invested for the benchmark.

LEGAL INFORMATION

All data relating to the fund are obtained from the book inventory and data relating to the indices and the characteristics of securities held in the portfolio are obtained from Bloomberg. The figures indicated relate to previous years. Past performance is not a reliable indicator of future performance. Investors are reminded that the composition of the portfolio may differ considerably from that of its benchmark index. As the management style is discretionary, the portfolio will never seek to reproduce the composition of the benchmark index either on a geographical or sector level. The benchmark index is therefore simply an a posteriori performance indicator. The risks and costs relating to investment in UCITS are described in the relevant prospectus. The prospectus and periodic reports are available on request from Dorval Finance. The prospectus must be provided to investors prior to subscription. The definition of risk indicators mentioned in this document may be found on the website: www.dorvalfinance.fr. Prior to any investment, it should be verified that the investor is legally authorised to invest in a UCITS. The UCITS is not authorised for distribution in jurisdictions other than the countries in which it is registered. Performance data does not take into account fees and commissions received in respect of the issue and redemption of units or tax costs imposed by the client's country of residence. If a UCITS is subject to a specific tax regime, it should be noted that this regime depends on the individual situation of each client and may be liable to change. This document is intended for professional and non-professional clients. It may not be used for any purpose other than that for which it was designed and may not be reproduced, distributed or transmitted to third parties, either in whole or in part, without the prior written authorisation of Dorval Finance. The information contained in this document may not be deemed to have any contractual value whatsoever. Dorval Finance may not be held responsible for any decision taken on the basis of information contained in this document. Dorval Finance, société anonyme (public limited company) with share capital of EUR 296,747.50 registered in the Paris trade and companies register under number B 391 392 768 - APE 6630 Z, AMF approval no. GP 93-08

Definitions

Flexible fund:	Financial product for which the allocation between asset classes varies over time in order to adapt to new market configurations at any time.
Alpha:	A fund's outperformance compared with its benchmark, expressed as a percentage. This is an indicator of the manager's ability to create value, by excluding the market effect. Therefore, the higher the alpha, the better the fund's performance compared with that of its benchmark.
Beta:	Measure of a fund's sensitivity to market movements (represented by its benchmark). A beta higher than 1 indicates that the fund amplifies the trends of its reference market on the upside as well as on the downside. Conversely, a beta lower than 1 means that the fund tends to react less to movements in its reference market.
Sharpe ratio:	Indicator of a product's outperformance relative to a risk-free interest rate, given the risk taken (the product's volatility). The higher it is, the better the fund.
Volatility:	Magnitude of the variation of a security, a fund, a market or of an index over a given period. A high volatility means that the price of the security varies significantly, and therefore that the security's associated risk is high.
Maximum performance:	Maximum gain historically recorded by the fund.
Maximum drawdown:	Maximum loss historically recorded by the fund.
Recovery period:	Time expressed in number of days the fund takes to exceed the highest net asset value over the indicated period.
Gain frequency:	Calculation over the fund's history since its creation representing the ratio of the number of positive observations to the total number of observation in the period.
Exposure as a percentage:	The fund's overall exposure takes into account the sum of the physical and off-balance sheet positions. As opposed to positions called of net assets: "physical"(those booked in the portfolio's inventory of assets), off-balance sheet positions include those taken in forward financial instruments, such as derivatives. Examples of derivatives: futures contracts, swaps, option contracts. A maximum limit to off-balance sheet exposure is stated in the prospectus.

Morningstar methodology

Neither Morningstar nor its content providers are responsible for any damages or losses arising from any use of this information.

Past performance is no guarantee of future results. References to rankings, awards and/or ratings are not an indicator of future performance by the fund or the fund manager.

The Morningstar rating applies to funds with a history of at least three years. It takes into account subscription fees, the risk-free return and the fund's volatility in order to calculate the MRAR (Morningstar Risk Adjust Return) ratio for each fund. The funds are then ranked by decreasing order of MRAR: the first 10% receive 5 stars, the next 22.5% 4 stars, the next 35% 3 stars, the next 22.5% 2 stars, and the last 10% receive 1 star. The funds are ranked within 180 European categories.
